

THE 47-POINT ROBOT WORK AUDIT CHECKLIST

Every automation opportunity hiding in your workflows
— found, named, and ready to eliminate.

"Use this checklist as a walk-through of your week. Work through each section honestly. Every 'yes' is a candidate for automation."

01 SURFACE THE REPETITION

- ☐ List your top 10 recurring tasks from the last 2 weeks.
- ☐ Highlight anything you do more than once per week.
- ☐ Flag any task that has the same steps every time.
- ☐ Circle anything that requires **copying/pasting** between tools.
- ☐ Mark every time you re-type information that already exists somewhere else.
- ☐ Identify every place you "check" something manually (status, inbox, spreadsheet, dashboard).

- ☐ Find every step where you "wait" for someone else (approvals, replies, assets, sign-off).
- ☐ Note every moment you "remind" someone (follow-ups, nudges, pings).
- ☐ List every place you collect the same data in multiple systems.
- ☐ Mark any task that starts with *"open X and look for Y."*

02 MAP THE WORKFLOW ANATOMY

- ☐ Define the **trigger**: what event starts it?
- ☐ Define the **end condition**: what does "done" mean?
- ☐ Write the **inputs** required (data, files, approvals, context).
- ☐ Write the **outputs** produced (emails, updates, records, decisions).
- ☐ Identify every **decision point** ("if this, then that").
- ☐ Identify every **exception path** ("unless...", "sometimes...").
- ☐ Note where **context is lost** (handoffs, tool switches, DMs).
- ☐ Identify the **source of truth** for each key field (name, status, owner, due date).
- ☐ Flag workflows with **unclear ownership** (everyone/anyone/no one).
- ☐ Flag workflows with **unclear SLAs** (no time expectation).

03 CLASSIFY THE WORK TYPE

- ☐ Count how many tools the workflow touches. **More tools = more automation opportunity.**
- ☐ Find steps that are purely **data movement** (A → B).
- ☐ Find steps that are **formatting/cleanup** (renaming, reformatting, resizing, converting).
- ☐ Find steps that are **categorization/tagging** (labels, folders, properties, statuses).
- ☐ Find steps that are **routing** (assigning, moving, delegating, escalating).
- ☐ Find steps that are **duplication** (same message sent to multiple places).
- ☐ Find steps that are **aggregation** (compile updates, weekly reports, rollups).
- ☐ Find steps that are **reconciliation** (comparing lists, matching records).
- ☐ Find steps that are **scheduling** (finding time, sending invites, rescheduling).
- ☐ Find steps that are **documentation** (meeting notes, summaries, decision logs).

04 AUDIT YOUR COMMUNICATIONS

- ☐ Locate every **recurring message** you send (client updates, internal updates, follow-ups).
- ☐ Locate every repeated **"explainer"** you write (how we do X, FAQs, onboarding).
- ☐ Locate every repeated **"ask"** you make (requesting assets, approvals, status updates).

- ☐ Find every meeting that exists mainly to **share status**.
- ☐ Find every meeting output that should be a **structured artifact** (tasks, decisions, next steps).
- ☐ Identify where meeting notes are taken but **not converted into tasks** automatically.
- ☐ Identify where action items are created but **not assigned or scheduled**.
- ☐ Identify where tasks are assigned but **not tracked to completion**.
- ☐ Identify where deliverables ship but **learnings aren't captured**.
- ☐ Identify where the **same question is answered repeatedly** in Slack/email.

05 FIND THE AUTOMATION OPPORTUNITIES

- ☐ Mark any workflow where the **"best next action" is predictable** from context.
- ☐ Mark any workflow with **high-volume, low-risk decisions** (approve, route, archive, label).
- ☐ Mark any workflow where a **template** could replace free-form work (intake, briefs, reports).
- ☐ Mark any workflow where a **form** could replace back-and-forth messaging.
- ☐ Mark any workflow where a **checklist** could prevent errors (handoff, QA, launch).
- ☐ Identify any workflow with **measurable success criteria** (conversion, response time, cycle time).
- ☐ For each flagged item, write one **automation hypothesis**.
